

CAMPBELLTOWN
HOSPITAL REDEVELOPMENT

MOVE

LINK BRIDGE AND LINK ROAD WORKS

You may have noticed hoarding in place across the Level 1 link bridge connecting Building A to Building B. As we near completion of the new clinical services building, the link bridge will re-open to overlook the grand staircase in hospital street. You can see the link bridge from inside hospital street in the above image.

Following completion of the Level 1 works, the Level 2 link bridge A-B will be temporarily closed for similar connections to take place. The MET team have been consulted during planning for these works as the path of travel to ICU will be impacted while hoarding is in place.

Our builders are also finalising the pedestrian pathways and road connections to the new clinical services building, which will see temporary changed traffic conditions along the internal road. Access to visitor and staff parking from 27 April to 5 May will be via the detour to the Therry Road entrance. Alternatively, enter the campus via the new Appin Road entrance.

GREEN LIGHT FOR ROOFTOP HELIPAD

Did you spot the helicopter landing on the new rooftop helipad in late March? The trial flight enabled a crew of technicians to confirm that all equipment and lighting is working as expected to accommodate future landings.

Check out the landing and read more about it on our **project website**.

39 DAYS TO GO!

Click [here](#) to take a tour of the new dental centre on Lower Ground in Building D.

FINAL TOUCHES AND FUTURE TOURS

Chief Executive Amanda Larkin recently joined Board Chair Sam Haddad and the Executive Leadership Team for a tour of the soon-to-be-completed clinical services building.

The group toured key areas, including the Emergency Department, mental health units and children's unit, seeing the various stages of completion and getting a feel for how consumers will experience the building.

With the final touches being placed on the inside, cleaning of the exterior has commenced. You may have seen our contractors abseiling down the 12-storey building, making it sparkle bright for the opening.

With less than 40 days until the first services move into the new building, planning is underway for a range of opportunities for staff and community to have the chance to explore the new spaces. Stay tuned!

TESTING THE EQUIPMENT

With the arrival of new furniture and equipment for the internal fitout, it can be tiring work testing all the orders.

Even the new patient entertainment system has to be trialed to ensure patients have a comfortable viewing experience. Project team member, Rod, has given the new tv and beds a user experience rating of 10 out of 10.
